

## Annual Water Quality Report 2024

With the summer season upon us we have started our third season of water sampling with the LaRosa Partnership Program. Results from past years can be found on our website.

With the phragmites nearly 100% gone on the south end of the lake it's now up to the homeowners to control it on their property. I would be willing to help anyone who needs it. There are a few small patches of phragmites on the east and north end of the lake. I feel after the summer, these patches should also be gone. If you see phragmite around the lake, please let me know.

I know of 5 property owners who have done the Lake Wise Program assessment on their properties and at least 3 more homeowners have scheduled assessments for this summer. Contact Alison Marchione for an assessment at [alison.marchione@vermont.gov](mailto:alison.marchione@vermont.gov) or 802-490-6128. I will speak more about this program at our annual meeting.

I'm looking forward to seeing everyone on the lake this summer,

Michael Pierce  
Water Quality Chairperson
